SUPERSTORE SALES

Overall performance analysis and management recommendations

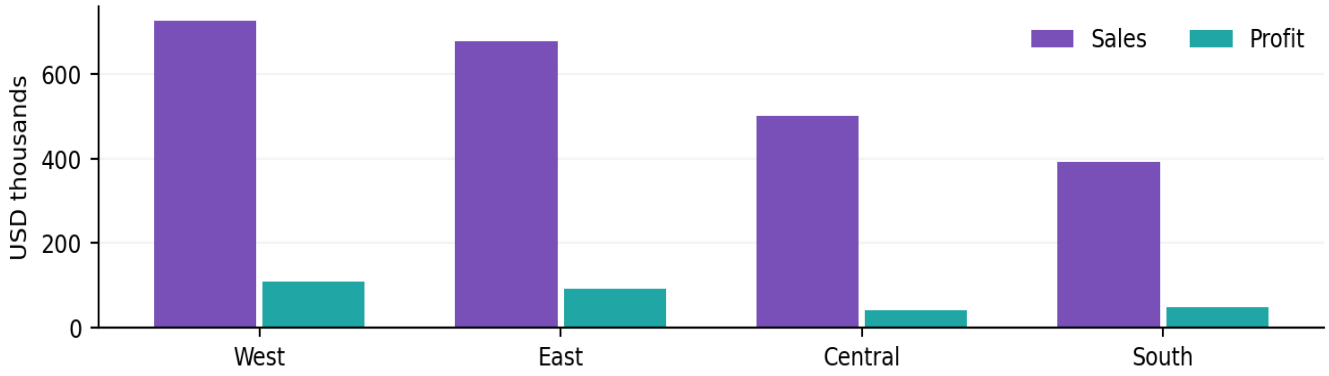

Based on the dashboard screenshot and 9,994 cleaned sales lines

TOTAL SALES	TOTAL PROFIT	PROFIT MARGIN	UNITS SOLD
$2.30M	$286.40K	12.47%	37,873

Executive assessment

Revenue is concentrated in the West and East, while the Central region earns the lowest margin. Technology generates the most sales and profit. Furniture sells strongly but contributes little profit because several subcategories lose money.

Regional performance

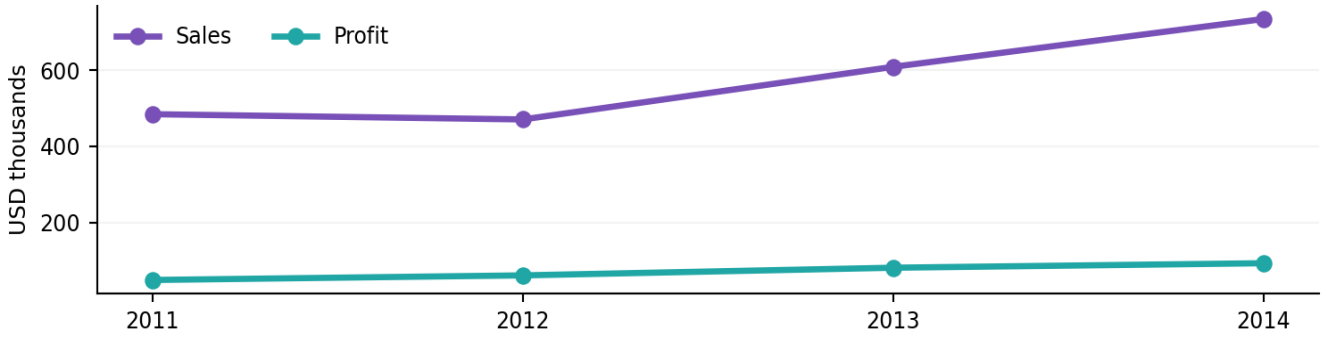

West	$725,458	$108,418	14.9%
East	$678,781	$91,523	13.5%
Central	$501,240	$39,706	7.9%
South	$391,722	$46,749	11.9%

Category performance

CATEGORY	SALES	PROFIT	MARGIN
Technology	$836,154	$145,455	17.4%
Furniture	$742,000	$18,451	2.5%
Office Supplies	$719,047	$122,491	17.0%

GROWTH, RISKS & NEXT ACTIONS

Annual sales and profit trend

2014 sales: $733,947 | up 20.6% from 2013 | 2014 profit: $93,508

Profitability concerns

Tables: $206,966 sales, $17,725 loss (-8.6% margin). **Bookcases:** $3,473 loss. **Supplies:** $1,189 loss. The Central region margin is only 7.9%, versus 14.9% in the West.

Discount pattern (association, not proof of cause)

The dashboard card shows **Sum of Discount = 1.56K**, a sum of percentages that has no useful business interpretation. Average row discount is **15.6%**. Rows discounted above 40% total $128,632 in sales and a $99,559 loss; other factors may also affect that result.

Recommended actions

1. **Review pricing and discounts**
   Investigate Tables and other loss-making products by region before changing prices.
2. **Improve regional margin**
   Examine Central region discount mix, category mix, shipping and product costs.
3. **Track growth with profit**
   Review annual and year-month sales alongside margin, not revenue alone.

Dashboard improvements before publishing

Replace the discount sum card with **Average Discount** and add **Profit Margin = Total Profit / Total Sales**. The Product visual in the screenshot lists Zebra products, while the dataset leader by aggregated sales is the Canon imageCLASS 2200 Advanced Copier ($61,600). Sort product sales descending and apply a Top 5 filter. Use a true Year Month date axis instead of combining January across all years; add date, region and category slicers.

Data and interpretation

Source: https://www.kaggle.com/datasets/josephguria/superstore-sales (Superstore.csv). The provided file contains 9,994 valid rows dated 2011-2014; no duplicates, blank rows or invalid dates were removed. Totals describe the historical practice sample. The screenshot provides a visual check; precise numbers above come from the cleaned data.
